

PROPREP^{LC}

When it comes to reliable automation of protein digestion for LC and LC-MS, the choice is simple.

Take control of your protein samples with Digilab's **NEW** ProPrep LC

When it comes to reliable automation of in-gel and in-solution protein digestion followed by sample preparation for LC-MS, the choice is simple. The ProPrep LC is the only instrument that has been specifically designed for this purpose. The ProPrep LC gives you peace of mind and your samples the best treatment.

The ProPrep LC comes standard with one reaction block, however can be upgraded to have up to four reaction blocks that can be independently controlled. The ProPrep LC can also be upgraded to a ProPrep II which allows samples to be spotted to commercially available MALDI plates in addition to LC vials.

The ProPrep LC Features:

- Flow-through reaction block, 96 well format, and temperature controlled
- Reagent, chilling
- Multi-enzyme use
- Accurate liquid handling
- In-gel or in-solution
- Transfer to LC vials
- Sample spitting
- Customizable protocols
- Ability to run multiple protocols
- Fully enclosed & HEPA filtered
